## **What's New in Sage 100 Fund Accounting Version 2013**

Version 2013 contains new features and enhancements that will help you leverage Sage 100 Fund Accounting to better fit your organization's needs. Whether you need advanced auditing of records throughout the system, streamlined transactions and reporting, or other time-saving features, version 2013 can help improve your day-to-day processes. For additional information regarding version 2013, please view the recorded What's New webcast by [clicking here](#).

### **This Just In: Sage 100 Fund Accounting**

With version 2013 you will find updates throughout the product to show our new name: Sage 100 Fund Accounting!

### **Advanced Organization Audit**

Maintain the security of your organization's financials more efficiently than ever before. The Advanced Security solution now includes our new Advanced Organization Audit, enabling you to track changes to key records in detail and quickly pinpoint suspicious activity when fraud is suspected. Save hours of digging through data by generating change reports for your internal and external auditing needs. Not only is Advanced Organization Audit a key asset to managing your organization's transparency—this tool can also help you easily locate and correct errors that are accidentally introduced!

### **New Features and Enhancements in Accounts Receivable**

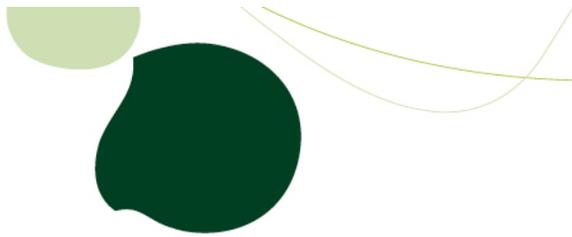

Version 2013 is packed with key enhancements to the Accounts Receivable Billing and Reporting modules, including the following, and more! The prepayment process has been improved to streamline entry and tracking of prepayment transactions throughout the system. User Defined Fields have been added to more A/R reports to enable users to further configure reporting to their organization's needs. Users of the A/R Billing module can now set up email templates for A/R invoices and send these forms directly to clients using SMTP.

### **Multiple Vendor Addresses for Accounts Payable**

Streamline your payment process and reduce time spent on data entry! If your vendors have multiple addresses, you can now designate a check address for each invoice in the system, and the system will automatically apply the correct address for each invoice.

### **Streamlined Set-Up for Product Training**

The training database provided with install and upgrade of Sage 100 Fund Accounting has been updated to make set-up for product training even easier than before. Organizations that sign up for product training no longer have to lose valuable class time sorting through default users and configuring default user rights. Starting with version 2013, the process is simple: one database, one default user, both provided with organization rights automatically defined.

### **Additional Email Functionality**

Emailing of forms is coming to Sage 100 Fund Accounting! In this version, users will be able to set up email templates for system-generated AR invoices, preview the message, and then send these documents directly to customers from within the system using SMTP. Stay tuned—emailing of additional forms will be added throughout updates and future releases as well.

### **HR and EWS**

HR and EWS 2013 offer several enhancements that will enable you to configure these modules to better fit your HR needs. HR users can now establish custom workflow steps for routine HR activities, including onboarding new employees, updating certifications, reviewing employee performance, modifying positions, and terminating employees. Additionally, distribution codes can now be created based on dollars earned and cost centers rather than just hours worked. In EWS, users can now add custom reports generated in the HR Report Writer and accommodate overtime entry using additional timesheet options.
